

ELEVATOR CONTROL SYSTEM

# C4 LOCAL MONITORING

Smartrise's C4 Local Monitoring uses the technology inside every Smartrise elevator controller to automatically collect detailed information about minute-to-minute operations, system events, faults, and operating statuses. More than just a passive database tool, C4 Local Monitoring can be easily configured to automatically contact your workstation whenever a problem arises.

C4 Local Monitoring is a program that communicates with elevators and group dispatchers through Ethernet and TCP/IP. The Server resides on the Local Area Network (LAN) with the elevator equipment. You can log on to the Server using any workstation running the Smartrise Client application.

Once connected, all information in the current log is immediately available. Select from preconfigured reports, pick start and end times, and information from the database is presented in a simple, precise format.

C4 Local Monitoring allows you to save collected information to a database. C4 Monitoring Interface hardware provided by Smartrise makes reports available 24/7 at any location in the building via browser.

## PRECONFIGURED REPORTS

- Hall Call Performance
- Hall Call Analysis
- Traffic Analysis
- Hall Call Log
- Car Use  
*(shows total number of HCs & CCs)*
- Car Call Log
- Event Log
- Percent In Service
- Door Timings
- Faults & Alarms History

## BENEFITS

- Collect, store, and recall system information for performance analysis or other needs
- Automatically alert workstation
- Retain records of building elevator traffic
- View or print report screens
- Save historical data to XML files
- Log maintenance activity
- Real-time monitoring of elevator cars
- Ability to activate, deactivate and control Car Call/Hall Call Security
- Dynamic security feature enabling rule configuration by day, hour, car, or floor.
- Ability to add or modify floor access codes for controlled access
- Replay panel enables review of car status before, during, and after fault or alarm events
- Intelligent parking management using configurable rules or historical data analysis
- Select inputs and outputs with real-time active/inactive status monitoring

ELEVATOR CONTROL SYSTEM

C4 Local Monitoring allows you to log maintenance activity, providing a history of faults and repairs.

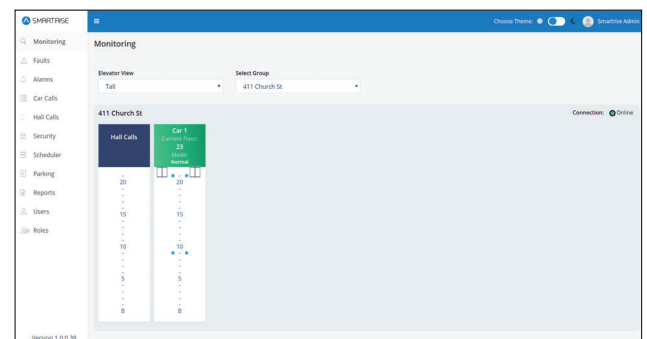

C4 Local Monitoring automatically collects data needed to track the performance of your elevator systems and to monitor elevator traffic over a certain period.

The Hall Call Log permits the user to analyze hall call wait times, allowing you to filter the information by date, time, car number, initiating call floor, riser, travel direction, door location, and minimum/maximum wait times. Administrators can flag and highlight selected wait time criteria.

The Hall Call Analysis Report displays all hall calls placed and groups wait times according to user criteria.
