Breakers

Breaker Replacement Procedure

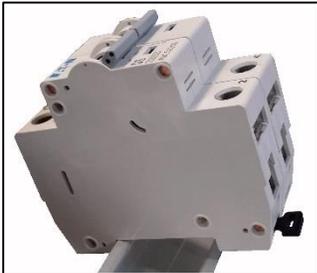

The breakers are mounted on the lower rail. Use the following procedure to replace the two different styles of breakers that Smartrise uses: Pushbutton and Single-Throw breakers.

Pushbutton Breakers:

1. Turn off Main Disconnect Power.
 2. Label and remove the wiring from the breaker to be replaced.
 3. Insert a flat blade screwdriver into the slot on the end and pull it back towards the main body of the breaker. Remove the breaker from the mounting rail.
 4. Install the new breaker onto the rail.
 5. Install the wiring removed in Step #2 on the new breaker.
- ** Installation is now complete ****

Single-Throw Breakers:

1. Turn off Main Disconnect Power.
 2. Label and remove the wiring from the breaker to be replaced.
 3. Insert a flat blade screwdriver into the small black tab at the base of the breaker and pull it out away from the breaker. Remove the breaker from the mounting rail.
 4. Install the new breaker onto the rail. Make sure the black tab is pushed back in, otherwise the breaker won't secure to rail.
 5. Install the wiring removed in Step #2 on the new breaker.
- ** Installation is now complete ****
