DESTINATION DISPATCH

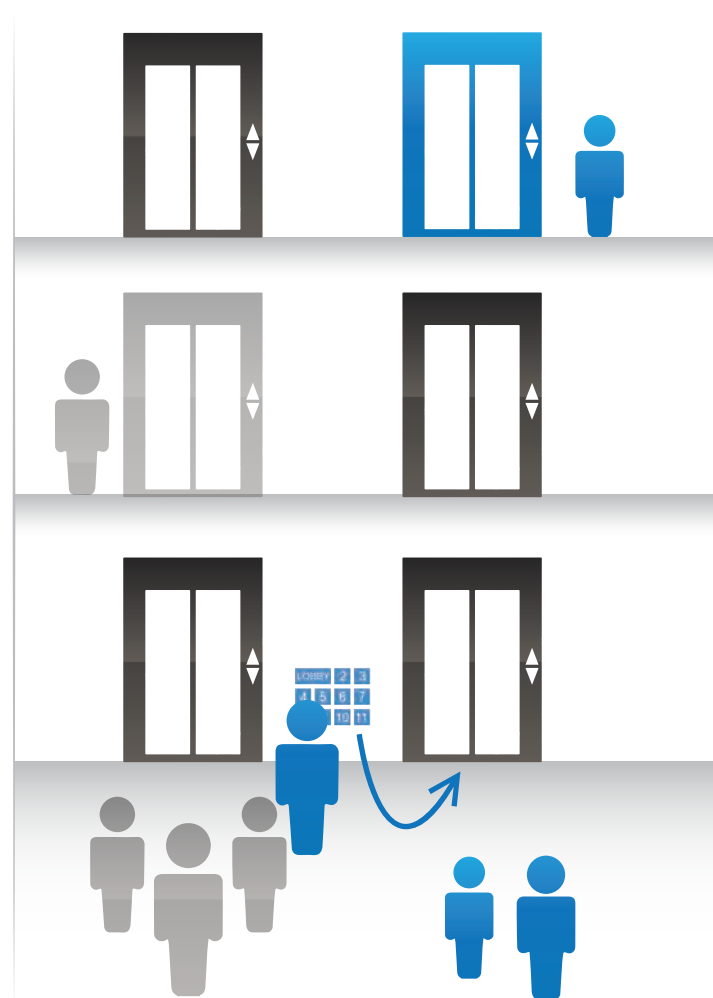

Less stress, More order

Destination Dispatch allows registration of floor call destinations using a touch screen display in the hallway.

The passenger will select their floor destination on the display. The system will then direct them to an elevator traveling to their destination. They will simply stand by the designated elevator until it arrives. Integrated voice guidance provides ADA compliance.

Destination touch screens can be placed at the lobby level to provide a “lobby boost” at times of high traffic, while keeping traditional 'up' and 'down' hall calls at the remaining floors.

Destination dispatch can be implemented as a complete destination based system where all floors feature an interface display.

Passengers are grouped based on destination. This reduces the number of stops and the overall travel time.
