1 Camera Failure In-Flight Test

Applicable Codes – ASME A17.1/B44-19 section 2.26.9.4

The following procedure describes the Camera Failure In-Flight test.

1. Place the car on the bottom floor.
2. Change the learned position of the second floor by decreasing the value of parameter 24-0097 by 500.
3. Place a car call to floor 2.
4. Once the car arrives to floor 2, verify that the DZ inputs are low and the car faults with “Stop no DZ”.
5. The car should not reattempt to move.
6. Test this by issuing a call.
